## BEAKERS

Beakers are one of the most essential and multi-functionary laboratory equipments used for various purposes in a lab.

Various uses of beakers are:

They are used to hold samples to be used later.

They are used for preserving small chemical reaction.

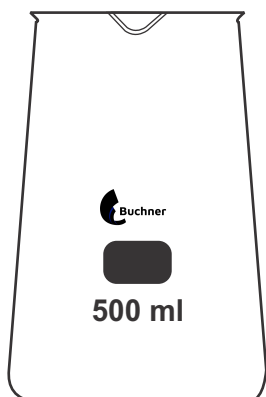

Beakers are also used for experiments like chromatography.

We manufacture beaker as per latest ISO, ASTM, IS standards depending upon customer requirement. Beakers are made up of only borosilicate glass 3.3 and have wide mouth for pouring the solutions easily. Any experiment which yields a liquid product uses beaker to catch the liquid.

As they are often used in laboratories for heating liquids/chemicals, uniform wall thickness on side & base is ensured. This helps in achieving the required optimum balance between thermal resistance & mechanical strength.

## BOTTLES

Screw Cap Bottles are heavy walled making them mechanically strong.

The screw caps are made of PP and are autoclavable, biologically inert with high chemical resistance. And are designed with plastic pouring ring for drip-free operation. 100 ml to 10000 ml have uniform GL 45 thread. Higher chemical resistance nylon caps are available on request.

Often they are made in tinted amber to protect light-sensitive chemical compounds from visible light, ultraviolet and infrared radiation. They are Ideal for use with light-sensitive media and for long-term storage of substances.

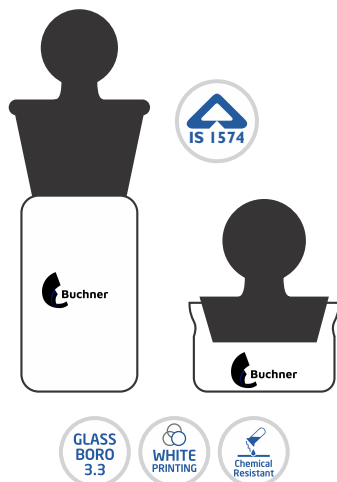

Reagent Bottles Narrow Mouth have sturdy ground necks with standard taper stoppers. **YGI** makes unique ergonomic design of these bottles to ensure smooth liquid flow.

Relative Density Bottles Density bottles are mainly used to determine the density of liquids of moderate viscosity.

BOD bottle is an incubation bottle is a main apparatus used for the Biological Oxygen Demand (BOD) test. During the 5-day BOD or BOD5 test process, the BOD bottle is used for incubating diluted samples under the 20 °C.

## BURETTE

Acid proof white print enamel for easier visibility and printing design to ensure ease of use.

Amber Burettes also available eg automatic burette.

Excellent Flow control and delivery times ensured as tooled delivery jet used.

Each Class A burette is individually identified.

- Rotaflow stopcocks have PTFE keys which do not require greasing.
- The PTFE key provide best drop control during titration process.
- Due to identical shape of PTFE key, Burette valve can be closed with gentle turn.

- PTFE stopcocks have identical keys, hence matching the pairs is not required during cleaning.
- PTFE is self lubricating hence keys do not require greasing.

- Specially designed solid glass stopcocks are manufactured from 3.3 low expansion borosilicate glass.
- Glass stopcocks are perfectly ground, hence no leakage occurs.

## CONDENSERS

A Condenser is designed to facilitate the cooling of hot vapours and liquids. It is structured in the form of a large glass tube, containing a smaller glass tube running through its entire length. Hot fluids pass through this small inner tube.

Typically, the outer glass tube has two hose connections to aid the passing of a coolant (usually tap water or chilled water/anti-freeze mixture). The coolant is introduced through the lower fitting, while the higher fitting serves as the exit point. Entering the coolant at the cooler point is a critical aspect as it helps maintain a smooth and correctly directed thermal gradient. Multiple Condensers may be connected in a series. Usually, a high flow rate is not essential for maintaining a cooling surface.

Special care should be taken while choosing Condensers keeping in mind their distillation rates, reflux rates and temperature gradients.

## CYLINDER

Covers a range of cylinders round base, hexagonal base, stoppered cylinders, nessler cylinder etc.

- Manufactured as per corresponding ISO standard.
- Manufactured from 3.3 low expansion borosilicate glass with precision bore tubing.
- Individually calibrated and identified for precision and high accuracy.
- Strict quality control through all steps to eradicate possible deviations.
- All measuring cylinders are calibrated to contain (TC, In) and all tolerance are according to IS/ISO/DIN/ASTM class "A" standards.
- Each Class A cylinder Supplied with individual certificate.
- Perfect spout designed assures pouring without any drip.
- Graduations and inscriptions are printed in amber/white enamel. Blue enamel also available on request.
- Cylinders are also available with penny head stopper and hollow hexagonal head stopper on request.

## FLASKS

Flasks are probably the most common and recognizable types of laboratory glassware.

All laboratories should be well equipped with different types of flasks. They are primarily used for making solutions or for holding, containing, collecting, or sometimes volumetrically measuring chemicals, samples, solutions, etc. Flasks can be divided into different categories on the basis of its use.

Reaction flasks, which are usually spherical and are accompanied by their necks, at the ends of which are ground glass joints to quickly and tightly connected to the rest of the apparatus. They are usually made of thick glass and can tolerate large pressure differences along with maintaining vacuum if need be.

Multiple neck flasks, which can have two to five, or less commonly, six necks, each topped by ground glass connections are used in more complex reactions that require the controlled mixing of multiple reagents.

Distillation flasks are intended to contain mixtures as well as to receive the products of distillation. They are sometimes spherical, test tube shaped, or pear-shaped, also known as a Kjeldahl Flask, due to its use with Kjeldahl bulbs.

Reagent flasks are flat-bottomed flask. Most useful Reagent flask used in a laboratory is the Erlenmeyer flask. It has a unique shape of flat and sturdy base which heats liquids faster than other flasks. With a long narrow neck and flat bottom, it is quite popular as it enables better mixing of liquids.

Florence or round-bottom flasks are spherical with one or more long necks. There are some flat-bottomed Florence flasks that can sit without being supported. These flat-bottomed Florence flasks are produced of borosilicate glass as they are used for boiling over a Bunsen burner.

Buchner Filtration Flasks are made of very thick and resistant glass to withstand high pressure conditions along with maintaining vacuum.

## FUNNEL

A rugged Borosilicate glass funnel with stem length approximately equal to funnel diameter. These Funnels have a 60° angle insuring close fit of filter paper for rapid filtration. The edge fo bowl is beaded for increased strength. The stems are heavy walled.

Separating Funnel with Screw Type with Teflon Key Stopcock with interchangeable glass stopper fitted with teflon plug stopcock. Made from heavy walled, borosilicate glass tubing for maximum mechanical strength. All separating funnels are designed for precision work in separation & extractors. Supplied either in conical/shape or in Globe Shape with plain stem.

## VOLUMETRIC FLASK

The calibration is done on automatic computer controlled machine and are calibrated to contain (TC, In) according to the ISO tolerance standards. These are supplied with PP stoppers or glass stoppers in both amber and clear glass. All flasks are printed in white colour & Amber Glass is market in white colour the meniscus mark is diamond grinded for longer persistence and better accuracy.

A trapezoidal shape ensures higher surface area and low centre of gravity. It ensures smaller volume volumetric flask toppling is minimised.

The printing of volumetric flask includes manufacturer logo, nominal volume, tolerances.
